197 Brain Frequencies Balancing, Mode-4

Complex description: This program helps to maintain the balance between concentration and relaxation. It reduces the pressure of stressful situations, allows you to stay active, to be in normal state of alertness, to think positive, and to feel relaxed. When using this program, it is recommended to focus on the disturbing issue (upcoming exam, negotiation, any bad memories, etc.). By focusing on a specific problem, we generate the pathologically enhanced excitation and activate mental and emotional experiences, which associated with some autonomic disturbances like: increased blood pressure, heart rhythm disorders, gastrointestinal dysfunction, respiratory system dysfunction, etc. As a result, we activate pathological reflex. Due to the supply of the rhythms from high frequency to low frequency, the program constantly stimulates the indicative reflex (the reflex of novelty) according to the law of induction it dramatically reduces the excitability of the cortical centers of the randomly activated conditioned reflex that will lead to the reduction of stressful situations. The program starts with a frequency above 33 Hz, then in the mode of "wave swing", the frequency decreases and increases. It stabilizes in the range of the alpha rhythm for a little while and, then it increases and decreases, and finishes at a frequency of 40 Hz. 209 Endorphins, Hormones of Happiness, Mode-4

Complex description: This complex is for production of endorphins. Low frequency antenna works at the 77 Hz frequency and is the one which is more likely to activate endorphins' production in a humans' body. (Research by Human Brain Institute of Russian Academy of Science, Saint - Petersburg, Russia). Two high frequency antennas, which work with modulating frequencies: First antenna is for frequencies such as 174, 258, 396, 417, 639, 741, 852, 963 Hz. These are so called Solfeggio frequencies or frequencies of Golden Ratio 1, 614 (some esoteric resources would compare these frequencies to those glands in the human body, which can be reflected to the energetic plane as chakras). Second antenna is meant to maintain the difference between Golden Ratio and regular frequencies at 77 Hz again. The purpose of the two high frequency antennas' algorithm (similar to binaural principle) is to create beats of a third brainwave (77Hz) as a difference between 2 frequencies mentioned above.

One antenna induces directed vibrations on the surface structures of the brain neuronal network with a frequency, for example, 174 Hz. Second antenna works with deeper layers of the cortex, inducing vibrations, for example, 251 Hz. As a result, the beat that occurs between them has a frequency of 77 Hz, which is more natural for perception for the neuronal network, than direct stimulation of the two frequencies mentioned above. With the 77 Hz frequency we have both - a direct impact (with low frequency antenna) and indirectly with the difference of direct Golden Ratio and matched frequencies, which is more natural for the brain.

228 Schumann Waves, Mode-4

Complex description: This program has imitation of Schumann wave frequencies. Human is in resonance with the world around and needs different signals from the environment which are today called 'biological normal'. The main frequency of Schumann waves is 78 Hz. Professor of electro-physics from Germany Schumann in 1950s calculated resonant frequencies of the Earth's shell space which is formed by the Earth surface that has good electrical conductivity and lower boundary of the biosphere. It is remarkable that hippocampus in the brain of all newborns and mammals has the same frequency. This area is responsible for attention and concentration capacity that is significant for sleep. If the environmental signal of 78 Hz is absent, then, according to

the experiments held on volunteers, there is a temporary disorientation and headaches appear. Momentary supply of Schumann waves stabilized a person for a few days. It means that the given 'biological normal' can be present not constantly, and organism can remember the nature frequencies and then continues to generate them independently. The program ends with alpha rhythm to energize a person.

248 The Regulatory Centers Activator, Mode-4

Complex description: While experiencing local exposure of electromagnetic field on any organs or systems using bio resonance Multi frequency correction in mode-2, we need to keep in mind neurohumoral regulation, which brain is responsible for with its regulatory centers - Thalamus, Hypothalamus, Hypophysis, Epiphysis. However, to influence brain activity directly in order to have neurohumoral regulation synchronize functioning on all levels,

much more advanced brain work technology is needed - it is called Multi Frequency Synchronization (MFS). We use MFS technology in Trinity in mode- 4, to expose regulatory centers and neurohumoral regulation system to frequencies from 2 levels - upper level - cerebral and lower level - cellular. We can achieve actual results in cellular biochemical processes due to Scanning and Self Adjusting technologies of maximal penetration resonance frequencies on the cellular level. Therefore, we impact lower levels in a body system's hierarchy. But in mode- 4 we can affect higher hierarchy structures as well - such as cerebral centers and various of its cellular levels. How does it happen?

First high frequency antenna 22-26 Hz acts more on the surface cell aggregations of Neocortex, while second high frequency antenna 17-19 Hz influence deeper Cerebrum cell aggregations. As a result of the difference between these two aggregations, the brain develops its own frequencies, which are directly perceived by and natural to regulatory centers. In this way we affect the brain by the brain itself. On account of this impact through the central nervous system, endocrine and immune systems and neurohumoral regulation mechanisms, we can see activation and synchronization of all rhythmic-oscillation body activity on all hierarchy levels. Thus, by affecting cortical rhythmic activity in mode- 4 with assistance of specifically designed programs, we assist the recovery and well-being improvement of the whole system.

Chronic (Neurasthenic) Depression

Morning: to eliminate fatigue, joylessness, exhaustion use “Energy Boost” and program “Depression Program-1”, which are intended for steady “awakening”.

Afternoon: to activate mental performance, prevent mental and overall exhaustion it is recommended to use “Cerebral Support”, and then “Conscious Control” complexes. If asymptomatic anxiety, uneasiness, agitation, and tiredness occur, add complex “Occasional Regulation”.

Evening: to eliminate anxiety and nervous tension it is recommended to use “Stress Program-1”, and “SchumannWaves” complexes. In case of headache, tension and any other form of discomfort occur, use complex “Anesthesia”.

Depression with Fear and Anxiety

Morning: “Alpha for Peace” and “Depression Program -2” Afternoon: “Cerebral Support” and “Overcoming Fears”

Evening: “Stress Program - 4” and “Sleep Program-2” for expedite relaxation and transition to sleep. For better results it is advised to eliminate all stimulating substances and conditions, such as alcohol, drugs, heavy meals and artificial light.

Depression with Vegetative Paroxysms

Morning: In case of endocrine regulation distress, it is recommended to use complex “Depression Program - 3”, which should be executed with closed eyes. Then it is suggested to use complex “Overcoming fears” in order to visualize and defeat fears, phobias and worries, especially due to public appearance, exams, crowds etc.

Afternoon: Complexes “Neurohumoral Regulation” and then “Short Break” to give time to rest if working in a high stress environment.

Evening: Complex “Stress Program - 3” is recommended as the main program when working with endocrine glands distress. In case of erectile dysfunction due to any reason, it is recommended to use complex “Sexual Regulation-1” in a time lapse of 30 minutes to 2 hours. In case of sleep deprivation - use “Sleep Program-2” right before sleep.

Onset Insomnia

Can be found among individuals who normally sleep well but can't fall asleep in a particular situation due to the various triggers (noise level, unusual environment). It can also occur at the moments of emotional elevation - joy, falling in love. It can develop

through poor sleep hygiene, systematic late bedtime, prolonged computer use, TV watching. This insomnia type can be developed due adaptive deprivation after jet lag, which can be worse if traveling from West to East, than from North to South. Onset insomnia may develop as well among people working shifts. It usually lasts up to 1 week.

Morning: Complexes “Entering a state of drowsiness after sleep” and “Increasing adaptation resources - 1”. Before sleep: Complexes “Entering a state of drowsiness before sleep” and “Sleep Program - 2”

Acute Insomnia

Usually takes place due to stress, emotional shock (in this case anxiety can be seen which leads to sleep deprivation). This type of insomnia includes sleep deprivation due to stimulants intake (caffeine). Acute insomnia could last 1-3 weeks.

Morning: Complexes “Entering a state of drowsiness after sleep” and “Stress Program - 2”

Evening: Complexes “Alpha for Comfort” and “Alpha for Peace”

Before sleep: Complexes “Entering a state of drowsiness before sleep” and “Sleep Program - 2”

Chronic Insomnia

Most likely to be related to anxiety, depression, alcohol or drug abuse. Around 50% of those suffering from chronic depression have neurotic disorders. This type of insomnia could be found among elderly: as people age, physiological sleep rest time reduces, but psychologically they tend to keep the same sleep routine. In these cases, we can see the rising amount of mid-night awakening. Chronic depression can lead to very serious repercussions. Among which are tiredness, concentration disorders, low work efficiency, overuse of various stimulating substances, such as caffeine, antidepressants, nootropics. Also, insomnia can be caused by antimalaria drugs, hormones regulative drugs and some antibiotics.

Morning: Complexes “Entering a state of drowsiness after sleep” and “Increasing adaptation resources – 1” Day: Complexes “Cerebral Program” and “Short Break”

Evening: Complexes “Alpha for Peace”, “Sleep Program-1”, “Entering a state of drowsiness before sleep” and “Sleep Program - 2”

Stress Reduction

Stress Programs 1-4

Alpha Rhythm, Alpha for Peace, Alpha for Comfort, Alpha for Physical Strength

Stress Acute

Add Complex “Negative Thoughts Erasing”, which is using a technique to eliminate negative psychological patterns.

Recommendations: It is required to choose an unpleasant disturbing case and concentrate on its most acute episode. Turn on the “Negative Thought Erasing” complex, and with your eyes closed enter the atmosphere of the disturbing event and start the practice. It can be repetitive vocalization or thought of the same most offensive

or disturbing words or phrases or going through the same painful event multiple times. It is very important to give yourself freedom of emotional response, embracing any unpleasant feelings, such as tension in temples' area, chest pressure, throat scratching. Due to its tediousness, the negative pattern will ease off and by the end of the session disturbing sensations will be eliminated (usually from 20 minutes to 1 hour). They will be replaced by flow of energy and feelings of cheerfulness and ease. In case of severe stress conditions if stress is not relieved, it is recommended to repeat the session.

Headaches and other Stress related discomforts

Add Complex "Anesthesia"

Recommendations: In case of headache or other stress related discomfort condition occur, it is recommended to use complex "Anesthesia" once or twice a day.

Allergies, Neurodermatitis, Bronchial Asthma as stress related discomforts

Add Complex "Stress Program – 2"

Recommendations: In case of allergies, neurodermatitis or bronchial asthma occur due to the stress, it is recommended to use Stress Program - 2 once or twice a day.

Endocrine regulation disorder due to stress

Add Complex "Stress Program – 3"

Recommendation: In case of endocrine disorders such as diabetes, dysmenorrhea or amenorrhea, eating disorders (anorexia or bulimia), various allergic reactions it is recommended to use the "Stress Program - 3" once or twice a day.

Spasmodic stress related conditions

Add Complex "Stress Program – 4"

Recommendations: In case of stress related migraines, "stitching" pain, vegetative-visceral paroxysms it is recommended to use the "Stress Program - 4" once or twice a day.
